## Experience

**Product Engineer**, San Francisco, CA — O(1) Labs

September 2019 - current role

- Leading development of newest marketing site using React.js, ReasonML, lots of CSS, GraphQL, and Figma on the Product Engineering team  
  
See my [contributions here!](#)
- Shipped new website [minaprotocol.com](#) with tight deadlines and limited engineering resources (team of 3)
- Onboarded intern and shipped [Leaderboard](#) product from ideation to development to QA to gathering user feedback
- Created documentation for all protocol-related features in testnet releases
- Tested UI features before docs were written, and offered improvements on usability  
Projects: archive node, and on-chain tokens feature for Testnet 3.2
- Interviewed Genesis Token grant members node operators as a part of onboarding process
- Connected with top node operators involved in Coda Protocol on leading technical sectors of community and sharing technical resources with wider audiences

**Engineering Intern**, San Francisco, CA — Upgrade Inc.

January 2018 - November 2018

- Helped maintain mobile and web apps using React.js on Credit Health team
- Created Alexa skill for user to check credit score using Upgrade's API (implemented OAuth 2.0 API in the backend microservices architecture, and demo'd skill to company post internship)
